To whom it may concern

Urimat Urinals

In 2005, Woodside Plaza Management committed the building to change from full flush urinals to a water saving programme. A system was chosen and implemented with varying success and with a decrease in water consumption.

With the above research completed and various outcomes noted, we wanted to further advance the process and test completely waterless urinals and the Urimat system was preferred. The simple design and function of the system together with the removal of urine odour, has impressed us and our major Tenant, Woodside Energy Ltd.

The cleaning time has been reduced and with the Urimat system of using cartridges, it has decreased down time in maintenance through blockages, in comparison to the initial system being used.

In November 2007, the total buildings urinals were changed over to the Urimat system, having installed a total of 91 units.

We would have no hesitation in recommending Urimat to other like minded Building Owners.

Yours sincerely
